

Historic Land Transaction Review

The Idaho Department of Lands (IDL) conducted the Historic Land Transaction Review in 2017 and 2018. The review determined 98 percent of acres sold since statehood did not exceed sale thresholds in the Idaho Constitution, and most of the remaining subset (outlined in this document) did not clearly demonstrate overages because historical records are unclear or do not exist, or because it is unknown if today's legal interpretations of the limitations were applied historically. The review involved examining land sale certificates, deeds, and other historical documents associated with 39,681 transactions. Of those, IDL flagged only 166 names of individuals or entities that appear to have more than the legally allowable acres attributed to their names. The 166 names are identified in the columns below. It is possible some acreages in violation of the Constitution may have occurred with some of the 166 individuals or entities but it would take significant time and resources to answer that question for several reasons, including but not limited to the following:

- It is unknown if today's legal understanding of the "lifetime" limitation on how many acres could be purchased by one individual was applied historically. Back then, the constitutional limitations may have been interpreted to apply to only individual sales, not an individual's entire lifetime.
- It is unknown if today's legal understanding that "indemnity school" lands are the same as "public school" lands was applied historically. Back then, the two categories of lands may have been interpreted to be different.
- It is unknown if the land sale deeds that were granted to one individual may have actually been purchased by a family member with the same name decades earlier or later.
- There may have been settlement agreements or litigation that resulted in one entity being deeded lands after the land sales occurred.

*1916-1982: Public School only. 1982+: All Endowments.

The majority of names and corresponding acreage amounts in this list are associated with multiple transactions that add up to the acreage amount shown for that name.

This name appears to be the same or similar to a name identified for separate transaction(s) in the same period. The IDL grouped the transactions and counted them as one.

This name appears the same or similar to a name identified for separate transaction(s) in another category. They were counted individually based on one category.
